

BISF House. Stage 1; Insulation Boards.

Ground floor insulation tongued and grooved usually 80mm, (dependent on performance criteria) mechanically fixed. First floor insulation include insulation strips cut to fit recess (where appropriate, there are several types of metal cladding used on BISF houses) and then boarded over with a 50mm board.

BISF House. Stage 2; Reinforced Base Coat.

Polymer modified base coat applied onto insulation board. Reinforcement mesh troweled into base coat as near to surface as possible.
